

No. 39L MAGNETIC CONTACTS WITH LEADS

The SWITCH portion has 4 randomly connected colored leads. For easy identification during installation, the CONTINUOUS PAIR is shorter than the SWITCHED PAIR.

The pairs may also be identified with an ohmmeter. Separate the SWITCH from the MAGNET and test across the leads. The shorted wires are the CONTINUOUS PAIR.

MOUNTING ACCESSORIES AVAILABLE:
 Nos. 24, 29 Brackets
 No. 52 Spacer
