

Creates a versatile energy saver system.

With the ADEMCO Energy Saver System, temperature control can be set to automatically adjust to a more economical level when the "armed away" command is given to the security system and return to normal when your customers reenter their home. With today's busy schedules, this feature simplifies a process and saves money while conserving energy.

This device can also be used through any touch tone telephone, locally or remotely, to change the thermostat setting.

Your customers can use any touch tone phone to control their security system, as well as to save energy.

The system also allows speaker output of the keypad message, upgrading a Vista-10SE, 20SE or 30PSE control panel into a voice response security system. The Energy Saver System allows a homeowner to use a touch-tone telephone to:

- ◆ Check the temperature of their house
- ◆ Adjust the temperature of their house
- ◆ Monitor the status of their security system
- ◆ Arm, disarm or initiate panic alarm

An ADEMCO Group Company

The 4286 VISTA Interactive Phone Module:**Relay Control:**

The 4286 VIP Module will operate relays or X-10 receivers on select Vista panels to control lights and appliances. Imagine the sales appeal of a security system your customer can call while at work or on travel to check the system status and/or turn on a light, heating unit, or other device.
