

GEM-EMIMOD INSTALLATION INSTRUCTIONS

The GEM-EMIMOD kit consists of four 1½" ferrite cable clamps, each designed to suppress unwanted signal noise generated within the **GEM-X255EX-230**, **GEM-P9600EX-230** and **GEM-P3200EX-230** model panels.

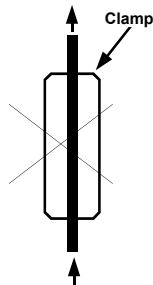

Install all ferrite cable clamps within the panel housing, on all wires and wire bundles (including the power cable but excluding the ground strap). Place *one* turn in each wire / wire bundle before installing each clamp, as follows:
